Summary

Backend engineer with 4+ years of experience owning systems from design through production. Built search and ETA systems at Zomato, billing infrastructure at Flexprice, and legal, messaging, and tenant operations platforms at Feeble. Strongest at turning ambiguous product requirements into systems with clear data ownership, failure recovery, operator controls, and measurable business outcomes. Primarily works in Go across APIs, distributed workflows, search, and infrastructure.

Experience

Feeble Apr 2025 – Nov 2026

Senior Software Engineer *Jul 2025 - Nov 2026*

- Built **Coop**, a self-hosted service that gives small-business teams secure, permission-gated access to Apple Messages, with durable message sync, encrypted storage, and API and **MCP support** for AI agents
- Designed and shipped **CaseFlow**'s **HIPAA security and recovery controls** for protected health information (PHI), including encrypted tenant volumes, **client-encrypted backups**, per-tenant **GCP KMS** keys, approval-gated decryption, and verified restore drills
- Built **CaseFlow**'s automated court-filing pipeline with **Temporal**, in addition to replacing Gemini-only classification with a lightweight **TF-IDF classifier** trained on labeled data and a **Gemini** fallback to reduce paid model calls
- Migrated **CaseFlow**'s entire **eight-stage case migration pipeline** from **RabbitMQ** consumers to **Temporal workflows**, adding durable orchestration, automatic retries, resumable execution, and human approval gates for migrations spanning **thousands of files per case**
- Built **Pubity**'s media-planning platform, turning PDF, CSV, and multi-sheet Excel uploads into **web-editable campaign plans** with **automated extraction**, **HubSpot** synchronization, deal search, versioning, and export workflows

Senior Consulting Engineer *Apr 2025 - Jun 2025*

- Led development of an **internal scheduling platform** - a **conversion focused Calendly alternative**, rebuilding its admin experience and **availability engine** with timezone-safe multi-person booking, real-time calendar conflict detection, and load-balanced team assignment
- Built a POC **AI operations assistant for Slack**, combining **MCP** tools, workspace OAuth, **Redis**-backed conversation memory, and versioned prompts to execute project workflows from chat
- Redesigned podcast studio management **NextJS** application using **Tailwind**, shipped automated thumbnail generation as a **Supabase Edge Function**

Flexprice Feb 2025 – Jul 2025

Senior Consulting Engineer

- Built **Flexprice**'s invoice rendering platform using **Typst**, with reusable templates, tenant-aware APIs, and **S3**-backed PDF storage and delivery
- Designed Flexprice's unified **Go error framework**, standardizing contextual error chains, HTTP status mapping, and safe client responses across more than **500 files**
- Built core **subscription-billing capabilities** for calendar-aligned billing cycles and mid-cycle **proration**, with configurable day and second-based calculation strategies
- Designed and prototyped an end-to-end **Stripe synchronization** architecture using **Temporal**, covering customer, subscription, and usage-event synchronization with batching, webhooks, auditability, and failure recovery

Zomato Jul 2022 – Dec 2024

Software Engineer II *Jul 2024 - Dec 2024*

- Led the "Near and Fast" homepage feature, implementing an ETA approximation pipeline with **Redis**, **Kafka**, and **DynamoDB** that delivered **Rs. 2M/month in incremental net margin**
- Improved the autosuggest **leader-election algorithm**, increasing dish-page **CTR** and generating an additional **Rs. 0.7M/month** in net margin through dish-page **ad conversions**
- Established a search based partnership-integration system serving **2,500+** corporate employees at **CRED** and **MakeMyTrip**

- Built an **internal devtool - an autosuggest debugger** that gave developers granular control over code paths in a web UI used during investigation and testing
- Led a **dish-tabs** based discovery oriented **homepage revamp**, replacing the "What's on your mind" section

Software Engineer I *Jul 2022 - Jun 2024*

- Enhanced dish-search **re-ranking**, optimizing distance and raising **Rs. 18M/month incremental net margin**
- Implemented related-restaurant backfill for low-supply dish searches, lifting **historically flat** dish page **order-through rate by 0.5%**
- Implemented a distributed catalog-search system indexing **100M+ SKUs** in **Solr**, with query relevance scoring and integration into the existing search platform
- Developed an internal devtool dish-tagging dashboard in **Go** and **React**, with bulk CSV processing and **DynamoDB** persistence for manual overrides
- Integrated a personalization-model re-ranker with dynamic ad positioning, event logging, and **Grafana** monitoring

Groww Jan 2022 – Jul 2022

Software Engineering Intern

- Redesigned the Help and Support microservice with a modular Java architecture
- Developed RESTful APIs for the Chatbot microservice to accelerate user-query resolution
- Created a **Kafka** and **Go** event-ingestion service to track and analyze user activity

Education

Georgia Institute of Technology Atlanta, GA (Online)
Master of Science in Computer Science *Jan 2026 – Present*

Vellore Institute of Technology Vellore, TN, IN
Bachelor of Technology in Computer Science and Engineering; CGPA: 9.09/10 *Jul 2018 – Jun 2022*

Projects

Open Source Developer Tools | *Go, cgo, EventKit* 2021 – Present

- Built **Romp**, a CLI and interactive TUI that runs coding agents in isolated worktrees, independently verifies changes, enforces review gates, and opens pull requests from labelled GitHub issues
- Built **rem** (157⋆) and **ical** (97⋆), native macOS productivity CLIs with full CRUD and sub-200 ms operations, powered by the **go-eventkit** cgo bridge
- Created **gtasks** (173⋆) before the AI-agent era, then evolved it with embedded Agent Skills for Claude Code, Codex, and OpenClaw
- Built **healthsync** (74⋆) to convert Apple Health exports into a local SQLite database queryable through the CLI, SQL, or embedded AI-agent skills

Technical Skills

Languages: Go, TypeScript, Python, JavaScript
AI/LLM: OpenAI API, Gemini API, Claude API, Deepgram (STT/TTS), LLM function calling, model-integrated workflow design
Tools/Frameworks: Temporal, Docker, Git, React, Next.js, Solr, Grafana, Datadog, AWS (ECS, EC2, DynamoDB)
Databases/Infra: PostgreSQL, Redis, MySQL, DynamoDB, Supabase, Kafka, Cloudflare R2
